Wireshark Foundation turned 3

Wireshark Foundation @WiresharkNews · Mar 2

It's official! We're now the Wireshark Foundation, a 501(c)(3) nonprofit that will host SharkFest, host Wireshark, and promote analysis and troubleshooting education.

You can find out more at wiresharkfoundation.org.

97% of enterprise code is open source.

97% of open source users contribute nothing back.

That's not a coincidence. It's a crisis.

The numbers are staggering:

→ The average enterprise application contains 900+ open-source components (2025 OSSRA Report)

→ Only 4,200 companies sponsor open source maintainers on GitHub — out of 300 million that use it

→ 60% of maintainers are completely unpaid, and 44% report burnout (Tidelift/ GitHub surveys)

And the consequences just arrived.

In March 2026, Kubernetes retires Ingress NGINX — the networking layer running in roughly half of all K8s environments. Why? Because the entire project was maintained by one to two volunteers in their spare time. Nobody stepped up. The Kubernetes Steering Committee issued a warning: staying on it after retirement leaves you vulnerable to attack.

This isn't an isolated case.

Wireshark Technical Steering Committee

- Election July last year

- Thank you Pascal and Graham for the years on the WFAC/WTSC
- Welcome Joakim and Mike to the WTSC

- Current committee

- Anders Broman
- Jaap Keuter
- Jasper Bongertz
- **Joakim Karlsson**
- **Mike Mann**
- Peter Wu
- Roland Knall
- Sake Blok

 **WTSC Elections via Wireshark-core** 26 June 2025 at 18:38
[Wireshark-core] Call for Election: Wireshark Technical Steering Co... [Details](#)
To: Wireshark Core, Cc: WTSC Elections,
Reply-To: Wireshark core developers

This message is from a mailing list. [Unsubscribe](#) 

We are excited to announce the upcoming election for the Wireshark Technical Steering Committee (WTSC). As outlined in the WTSC Charter, available at <https://wiresharkfoundation.org/pdf/wtsc-charter-2024-05-01.pdf>, this committee plays a crucial role in guiding the technical direction of Wireshark.

All individuals who have contributed to Wireshark via Gitlab over the past two years are eligible to vote. This is a great opportunity to have your say in the future of Wireshark and shape its development.

The election will take place on the dedicated website <https://elections.wireshark.org>, starting from 2025-07-01 00:00 (UTC) and closing on 2025-07-15 00:00 (UTC). We encourage all eligible contributors to participate and cast their votes during this period.

To learn more about the candidates standing for election, please visit <https://elections.wireshark.org/candidates/>, where you can find a list of candidates and information about their backgrounds and goals for Wireshark.

Your involvement is crucial in selecting the committee members who will oversee the technical aspects of Wireshark. We look forward to your participation in this election and to continuing the advancement of Wireshark together.

All contributors will automatically be eligible to vote. To confirm your eligibility status, login on the voting platform using your Gitlab account. If your non-code contributions should make you eligible to vote, you can request an exemption by writing an email to wtsc-elections@wireshark.org. List your contributions to the Wireshark project that make you eligible to vote.

Voting will be approval voting, where each voter may select up to eight candidates. The eight candidates with the most votes win the election.

Key Details:

- Eligibility: Contributors to Wireshark over the past two years
- Election Period: 2025-07-01 00:00 (UTC) to 2025-07-15 00:00 (UTC)
- Voting Platform: <https://elections.wireshark.org>
- Candidate List: <https://elections.wireshark.org/candidates/>
- WTSC Charter: <https://wiresharkfoundation.org/pdf/wtsc-charter-2024-05-01.pdf>

Let's come together to shape the future of Wireshark. Cast your vote and make your voice heard!

On behalf of the WTSC voting commission:

Eugène Adell
Darius Davis
Uli Heilmeyer

Wireshark Certified Analyst (WCA)

- Launched at Sharkfest '25 US
- "This new certification is designed to formally recognize engineers who demonstrate professional-level proficiency in network protocol analysis and advanced troubleshooting using Wireshark."
- See:
<https://www.wireshark.org/certifications/>

Sharkfest

- Sharkfest '26 US
 - July 18-23 in Nashville, Tennessee
 - see: <https://sharkfest.wireshark.org/sfus/>
- Sharkfest '26 EU
 - November 2-6 in Brussels, Belgium
 - see: <https://sharkfest.wireshark.org/sfeu/>

Wireshark & TCP training

- April 23 & 24, Zaltbommel, open inschrijving
 - see: <https://portal.ntwrkpeople.nl/cursus/2-daagse-training-wireshark>

Wireshark & TCP training

This training is meant for networkspecialists that want to enhance their protocol analysis and troubleshooting skills. Many application and network problems are difficult to solve without looking at the communication between all systems involved. By looking at captured network packets the culprit in the communication can be determined. In this training students will learn how to make better use of the features of Wireshark as well as understand the working of the TCP protocol.

Wireshark

To make effective and efficient use of Wireshark, you need to tweak Wireshark in order to show all relevant packets and details on your screen. We will look at changing the GUI, using configuration profiles, timestamping options, coloring, filtering, TCP stream graphs, protocol preferences, etc.

TCP

Many applications use TCP as transport protocol. The analysis of TCP streams is complex and could lead to the wrong conclusions. This training will teach you about the three-way handshake (including the meaning of the options), sequence number analysis, Window scaling, SACK, DSACK, (fast) retransmissions, slowstart, congestion window, etc.

Our Meetup

- Costs for meetup.com has risen
- Only 1 meetup per year
- We do not use the community features
- Solution:
 - mailing-list (perhaps under @wireshark.org)
 - official wireshark pretix site for events (sharkfest, etc)
- And of course...
 - We look for a host for our 2026 Wireshark Users NL meetup, please reach out to us :-)
